

Waffletruss design rail gibs for longer lasting Rail Gibs

We strengthened the side walls with a powerhouse design, using two polymer materials with just the right performance characteristics. . .and our superperforming gibs are priced far less than you'd expect.

We call our design "waffletruss" reinforcing. It's similar to the design used to strengthen railroad trestles. Horizontal and vertical support members are molded right into each gib. Each member resists compression and torsion for smooth gliding along the guide rail.

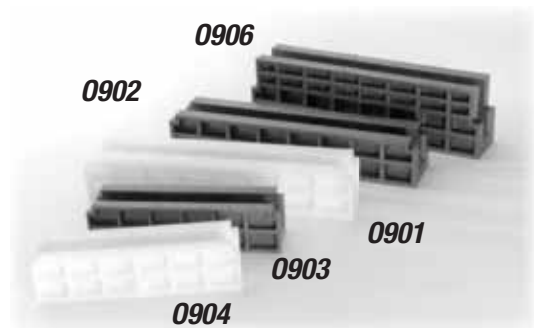

ZYTEL™ NYLON™ GIVES EXCELLENT SERVICE

Each gib is available in your choice of two outstanding polymer products. The white gibs are made from DuPont Zytel Nylon. Zytel gibs run quietly and absorb shock and vibration, and its lowfriction properties promote cool running, long life.

CHOOSE NYLATRON™ FOR BEST PERFORMANCE

If you believe that elevators should be seen and not heard, then Nylatron gibs should be on your shopping list. Black Nylatron (from The Polymer Corporation) generates 20% lower friction than its Zytel cousin. This highperforming material will outlast Zytel by up to 50% because it's got a lubricant impregnated right into the polymer. *This means that if normal lubricating service is interrupted, the Nylatron gibs will run dry for a limited time on their own lubricant...until additional lubricant can be applied...without damage to the gib or the rail.*

Crisscross "waffle truss" gives Adams rail gibs the strength they need to outlast and outperform ordinary gibs

RAIL GIBS ORDERING INFORMATION										
Adams part no.	Type	Material	Dimensions				OEM part #			
			Length	Width	Height	Slot (DxW)	Dover	EpcO	Esco	Otis
O901	8# rail	Nylon	8½"	1 11/16"	1 1/2"	1" x 5/8"	9233905	R	3046006	380AJ1
O902	8# rail	Nylatron	8½"	1 11/16"	1 1/2"	1" x 5/8"		RG		
O903	8# rail	Nylon	5½"	1 3/8"	1 3/8"	1" x 5/8"		W		
O904	8# rail	Nylatron	5½"	1 3/8"	1 3/8"	1" x 5/8"		WG	3046019	380AP1
O906	15# rail	Nylatron	8½"	1 11/16"	2 3/8"	1 7/8" x 5/8"		RHG		380AH1

NYLATRON® GUIDE SHOES

Adams manufactures these direct replacements for Britishtype rail gibs, made from selflubricating Nylatron.

Blackcolored Nylatron is impregnated with molybdenum that permits temporary dry running with safety. Nylatron has 20% less friction than conventional Nylon®, and has 50% greater wear capacity. Its stiffness, hardness and abrasion resistance are superior.

Our Britishtype gibs are used throughout the U.K., in Europe, and in some U.S. elevator installations.

Order replacement gibs individually, or in convenient, moneysaving sets of three. See table below to order.

GUIDE SHOES (INDIVIDUAL AND SETS)				
Adams part no.	Dimensions			
	Length	Width		
OB901	4 11/16"	119mm	3 1/32"	25mm
OB902	4 11/16"	119mm	5/8"	16mm
OB903	5 29/32"	151mm	1 3/16"	30mm
OB904	5 29/32"	151mm	25/32"	19mm
OB901A	Contains 2 pc. OB902, 1 pcs. OB901			
OB903A	Contains 2 pcs. OB903, 1 pc. OB904
